INTERNAL COMPONENTS

The Stearns & Foster Foam Encased System is comprised of 5 proprietary components that work together to provide an ultra luxurious sleep experience.

1. Foam Encased Top

Proprietary layer of foam provides relief from pressure points.

2. Foam Encased Edge

A continuous, seamless perimeter of high density, high performance foam that completely surrounds the innerspring system for greater sleep surface and unequalled edge support and stability.

3. Foam Encased Base

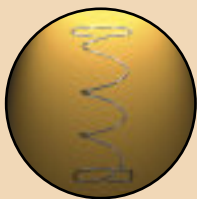

High quality polyolefin foam base below the innerspring system contains support channels that respond to weight and pressure to absorb energy and dampen motion.

4. Stearns & Foster Innerspring System

Made of 12¾ gauge steel, the innerspring coils are double tempered to maintain memory and shape and are double offset for better hinging and body contouring, to support the body's every curve and movement. 416 coils (Queen), 5T-12 ¾ gauge.

5. UltraSteel Box Spring

Patented fully functional box spring amplifies perimeter firmness and extends Comfort Life by deflecting weight from the mattress. 20% more steel provides enhanced strength.
